

AI-powered intelligence for supply chain disruption management

Powered by your **Disruption Agent**

See disruptions. Solve them – instantly.

Supply chain teams are buried in alerts. Every headline becomes a spreadsheet. Every spreadsheet becomes someone's problem. Meanwhile, confirming impact with suppliers means hours on the phone waiting for responses. The result? Critical risks get lost in the noise, and competitors secure alternatives first. The [Disruption Agent](#) helps your supply chain risk, sourcing, and operations teams:

- **Receive relevant alerts:** Get instant notifications with AI that tells you what matters and why
- **End the scrambling:** Know which suppliers to contact and what actions to take, with step-by-step guidance
- **Catch problems early:** Test your supply chain against potential disruptions and build contingency plans

No more manual triage. No more spreadsheet chaos. Just clarity and speed.

Fueled by global intelligence

| **100M+**

news sources
monitored 24/7

| **40+**

event types tracked (fires,
cyberattacks, port delays, and more)

| **100+**

languages analyzed
in real-time

| **16+**

years of supplier-validated
supply chain data

What you get instantly

Built into the platform

Chat-enabled agentic capabilities included in all of Resilinc's packages: [SC Watch](#), [SC Monitor](#), and [SC Command](#):

- **Configure:** Define which event alerts and WarRooms you see based on your role, suppliers, parts, categories, region, and event types
- **Monitor:** 24/7 disruption tracking with on-demand summaries, supplier response history, and real-time WarRooms
- **Explore:** Drill into impact details: which sites, parts, suppliers, and contacts are affected

The Disruption Agent

The [Disruption Agent](#) builds on the foundational features with advanced capabilities for enterprise teams managing complex, multi-tier operations:

- **Prioritize:** Auto-rank WarRooms by supplier tier, recovery time, revenue at risk, and BCP score
- **Customize:** Set prioritization rules to match your business strategy (for example: if X happens, then do Y)
- **Simulate:** Run what-if scenarios to understand exposure across regions, suppliers, and parts before disruptions hit
- **Mitigate:** Launch proven playbooks and supplier assessments with guided workflows that learn from your patterns
- **Collaborate:** Track supplier responses, send automated nudges, and maintain accountability—all in one platform

Why it matters now

- **Speed wins:** The first company to secure alternatives comes out ahead
- **Disruptions aren't slowing down:** From geopolitical tensions to cyberattacks—the frequency and severity keep climbing
- **Coordination takes too long:** Tracking down suppliers and aligning internal teams manually means lost time
- **Supply chains are more complex:** Multi-tier networks and single-source dependencies make every disruption harder to resolve

What leading teams achieve

- **Minutes, not days:** Respond to critical disruptions before competitors
- **Signal over noise:** Focus only on disruptions that impact your parts, suppliers, and revenue
- **Clear accountability:** Keep internal teams and suppliers aligned throughout the entire lifecycle
- **Unified visibility:** Keep executives, procurement, and operations teams aligned with real-time summaries and status updates

Trust built in

Connected intelligence

Scans 100M+ news sources across 40+ event types in 100+ languages to detect disruptions along with 16 years of supplier-validated mapping

Learning that matters

Gets smarter from your actions, your suppliers' responses, and nearly two decades of disruption and mitigation history

No LLM data sharing

Your supply chain data is never shared or used to train public models

Human-in-the-loop

AI guides and automates, but your team stays in control of critical decisions
